

CHAPTER V

CONCLUSION AND SUGGESTIONS

This chapter deals with conclusion of the result and suggestions for the next researchers.

A. Conclusion

The conclusion is divided into two kinds of result: the result of item analysis and the result of interview.

1. The Result of Item Analysis

This item analysis has determining part to the validity also the content validity; the reliability of item is reliable. In addition there are the difficulty level and the discriminating power. It is an equal item which covers four determining analysis. The multiple choice item also has different characteristic on each item which depends on the students' answers spreading on item and the computing data uses the formula put on it.

2. The Result of interview

The result on interview shows many opinions on it, the item that is made by MGMP group. It has the test item based the concrete data empirical on range. Moreover, the item has been arranged based on the rule of item arrangement, therefore it is the good item test on it.

B. Suggestions

Hopefully, the research of an item analysis on English first semester test for eighth students of SMP N 2 Tonjong can give the information of item analysis theory for the teachers, lecturers, and the students. The result of this research also can be used as the additional references of item analysis especially in item test. The detail data of the research have been compiled in the data presentation and in the appendices in order to make the readers will not find any obstacle in understanding this thesis. Item analysis is conducted to find out the quality of test without making down the test producer. Furthermore, it is necessary to the test producer for more attention to arrange the test item without any human error or technically. It is to make it the good quality of test item which is consist the important rules of test arrangement. Item analysis has many theories to be applied, make sure we have collected many knowledge about the item analysis. Moreover there needs to use our accuracy to compute the data. And also to analyze with all theory the test arrangement formulas on it, as for the end to get the complete analysis result . It is suggested to the next researchers to conduct a research about item analysis. In the other side the students are able to use this research as a reference to improve their knowledge in descriptive study.
