

CHAPTER V

CONCLUSION AND SUGGESTIONS

In this chapter, the writer would like to present the conclusion. The writer also provides some suggestions for the readers.

A. Conclusion

After the data analysis is done, the next step is giving conclusion. According to the findings of analysis in the previous chapter, it can be concluded that there are 141 words which is analyzed in *Harry Potter and Philosopher's Stone* movie script as slang language. Based on its word formation type the words are divided into 1 acronym (1%), 71 blending (50%), 8 borrowing (6%), 10 clipping (7%), 3 coinage (2%), 6 compounding (4%), 2 conversion (2%), 38 derivation (27%), 2 multiple processes (1%) and backformation (0%). Therefore, the most dominant way of word formation in slang language found in *Potter and Philosopher's Stone* movie script is blending, in which it is dominated by a combination between personal pronoun and auxiliary to be.

B. Suggestions

Finally, the writer suggests that the English learners can study more about slang language including the way of word formation, so they can analyze and understand what is slang language. Furthermore, the writer suggests the next researcher if they want to conduct a study about slang language, they can use the same theory as the writer used George Yule theory, but they must be more

innovative and creatively, not only use a theory which has been used by the writer but they can refer to any other theory such as O'Grady and Guzman theory as references and updated. The writer also offers them that they can analyze other source of data which is other series of Harry Potter movie script, not only British movie script but others such as novel, journal, social media text or speech, etc.
